

# GLOW POST

Solar Powered Lighted Post  
Automatically turns on at Dusk

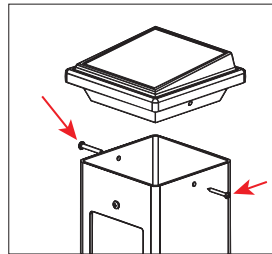

## Instructions

### Step 1.

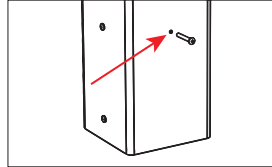

Remove the two screws holding the light on.

Remove the stake that is stored inside.

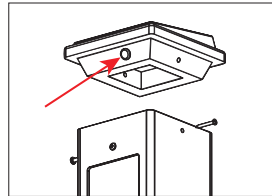

### Step 2.

Remove the screw at the bottom back of the Glow Post. Do not lose this screw. You will use it to secure the Glow Post on the stake once its in the ground.

### Step 3.

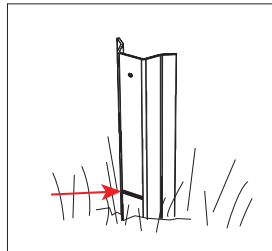

Press the button on the front of the light to activate the LEDs. Put your hand over the top of the solar cells to shield it from light. The lights should come on. If they do not, you may need to charge the batteries first.

The lights need 6-8 hours of sunlight to fully charge.

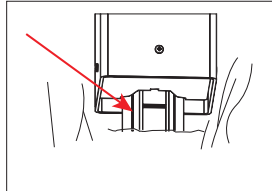

### Step 4.

Drive the stake into the ground where you want to place the Glow Post. It should be driven into the ground up to the black line. This black line must line up with the base of the post to align the hole in the top of the stake with the hole in the back of the post.

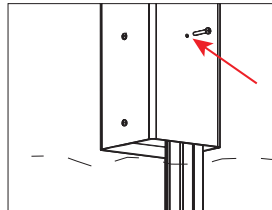

### Step 5.

The stake is then inserted into the bottom of the post aligning the top hole of the stake with the hole in the back of the post. This should occur with the bottom of the post aligned with the line on the stake.

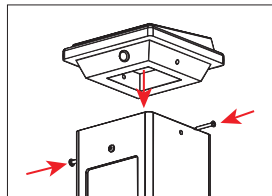

### Step 6.

Once it is aligned, put the screw in the bottom back back in the hole so it goes through the hole and secures the post to the stake.

### Step 7

Replace the solar light back on the top of the post and put the two screws that held it in back in place.

**The glow post should be positioned where it gets 6-8 hours of sunlight or bright light during the day to charge its batteries.**

**Metal Stake is stored inside post for shipping.**

This product contains a replaceable 18650 Li-ion battery / 3.7V.

If light is no longer bright after 8-12 months, replace the battery.

Operating temperatures -10° C (14° F) to 45° C (113° F).
